MAJOR COURSE SEGMENT	HOURS	LEARNING OUTCOMES
		The student will be able to:
Standard 205.1 Identify and select an electronic sensor for an application	2	 Performance indicator Select an electronic sensor type for an application. Select sensor switch output type, NPN or PNP, for an application. Knowledge Indicator Describe applications of electronic sensors. Describe the operation of 2 types of transistor(NPN,PNP) used in electronic sensors. Define sinking and sourcing signals. Describe the limitations of interfacing transistor devices to other control devices. Describe the function and application of optolisolation
Standard 205.2 Connect and test an inductive proximity sensor	1.75	 Performance Indicator 1. Connect an inductive proximity sensor. 2. Test an inductive proximity sensor. 3. Adjust an inductive proximity sensor for best performance. Knowledge Indicator 1. Describe characteristics that affect inductive proximity sensor operation.

sensor 1.75 performance: Knowledge indicator Standard 205.4 Connect and test a magnetic read switch 1.75 Connect a magnetic read switch 1.75 3. Adjust a magnetic read switch 1.75 Standard 205.4 Connect and test a magnetic read switch 1.75 Standard 205.4 Connect and test a magnetic read switch for best performance. Knowledge indicator Standard 205.5 Connect and test a hall-effect sensor 1.75 Standard 205.6 Connect and test a hall-effect sensor Standard 205.6 Connect and test a hall-effect sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor Standard 205.7 Interpret basic electrical control schematics 2 Performance indicator Standard 205.7 Interpret basic electrical control schematics 2 Standard 205.7 Interpret basic electrical control schematics Standard 205.7 Interpret basic electrical control schematics 2 Connect and test electror alkador schematics Standard 205.8 Connect and test electric relay sequence circuit schematic and power diagram. 2. Descrite the schematic ensor for basic centrol dia	r		
Standard 205.4 Connect and test a magnetic reed switch. 2. Fest a magnetic reed switch. 2. Fest a magnetic reed switch. 2. Fest a magnetic reed switch. 3. Adjust a magnetic reed switch. 1. Describe characteristics that affect magnetic reed switch. 5. Standard 205.5 Connect and test a hall-effect sensor 1.75 Standard 205.5 Connect and test a hall-effect sensor 2. Fest a hall-effect sensor. 2. Test a hall-effect sensor 2. Test a hall-effect sensor. Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.7 Interpret basic electrical control schematics 2 Standard 205.7 Connect and test electro-pneumatic power 3 Agiust a photoelectric sensor 1. Describe the arcelerial ladder control schematics. Knowledge indicator 1. Describe the schematic symbols for electrical control schematics. Knowledge indicator 1. Describe the schema	Standard 205.3 Connect and test a capacitive proximity sensor	1.75	 Connect a capacitive proximity sensor. Test a capacitive proximity sensor. Adjust a capacitive proximity sensor for best performance. Knowledge Indicator Describe characteristics that affect capacitive
Standard 205.5 Connect and test a hall-effect sensor 1. Connect and leffect sensor. Standard 205.5 Connect and test a hall-effect sensor 3. Adjust a hall-effect sensor. Standard 205.5 Connect and test a hall-effect sensor 3. Adjust a hall-effect sensor. Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.6 Connect and test a photoelectric sensor 1.75 Standard 205.7 Interpret basic electrical control schematics 2 Standard 205.7 Interpret basic electrical control schematics 2 Standard 205.8 Connect and test electro-pneumatic power schematics 2 Standard 205.8 Connect and test electro-pneumatic power 3 Standard 205.9 Connect and test electro-pneumatic power 3 Standard 205.9 Connect and test electro-pneumatic power 2.75	Standard 205.4 Connect and test a magnetic reed switch	1.75	 Connect a magnetic reed switch. Test a magnetic reed switch. Adjust a magnetic reed switch for best performance. Knowledge Indicator Describe characteristics that affect magnetic reed
Standard 205.6 Connect and test a photoelectric sensor 1.75 3. Adjust a photoelectric sensor. Standard 205.6 Connect and test a photoelectric sensor 1.75 3. Adjust a photoelectric sensor. Standard 205.7 Interpret basic electrical control schematics 2 Performance indicator Standard 205.7 Interpret basic electrical control schematics 2 Events that affect photoelectric sensor. Standard 205.7 Interpret basic electrical control schematics 2 Events that affect photoelectric sensor. Standard 205.8 Connect and test electro-pneumatic power circuits 3 Adjust a photoelectric sensor. Standard 205.9 Connect and test electric-relay sequence control circuits 3 Events that affect photoelectric sensor. Standard 205.9 Connect and test electric-relay sequence control circuits 3 Events that affect photoelectric sensor. Standard 205.9 Connect and test electric-relay sequence control circuits 2.75 Connect and operate a double-acting cylinder using a 5/2 solenoid-operated on power diagram. Standard 205.9 Connect and test electric-relay sequence 2.75 Connect and operate a notor control start/stop circuit.	Standard 205.5 Connect and test a hall-effect sensor	1.75	 Connect a hall-effect sensor. Test a hall-effect sensor. Adjust a hall-effect sensor for best performance. Knowledge Indicator Describe characteristics that affect hall-effect sensor
Standard 205.7 Interpret basic electrical control schematics 2 1. Interpret basic electrical ladder control schematics. Knowledge Indicator Standard 205.7 Interpret basic electrical control schematics 2 1. Describe the schematic symbols for electrical control oricults. Standard 205.8 Connect and test electro-pneumatic power circuits 2 2 2 Standard 205.9 Connect and test electric-relay sequence control circuits 3 2 2 Standard 205.9 Connect and test electric-relay sequence control circuits 2.75 3 2.75	Standard 205.6 Connect and test a photoelectric sensor	1.75	 Connect a photoelectric sensor. Test a photoelectric sensor. Adjust a photoelectric sensor for best performance. Knowledge Indicator Describe characteristics that affect photoelectric sensor operation.
Standard 205.8 Connect and test electro-pneumatic power 3 Performance Indicator 3 2. Connect and operate a double-acting cylinder using a 5/2 solenoid-operated pneumatic DCV. Knowledge Indicator 1. Describe the function of a power diagram. 2. Describe the function of a power diagram. 2. Describe the function of basic 2-step electric-relay sequence control circuits 1. Interpret the operation of basic 2-step electric-relay sequence circuit. Standard 205.9 Connect and test electric-relay sequence control circuits 2.75	Standard 205.7 Interpret basic electrical control schematics	2	 Interpret basic electrical ladder control schematics. Knowledge Indicator Describe the schematic symbols for electrical control circuits. Describe the operation of basic control logic. Describe basic electrical ladder schematic
Standard 205.9 Connect and test electric-relay sequence 2.75 1. Interpret the operation of basic 2-step electric-relay sequence circuit schematic and power diagram. Standard 205.9 Connect and test electric-relay sequence 2.75 3. Connect and operate a relay-controlled sequence circuit. Standard 205.9 Connect and test electric-relay sequence 3. Connect and operate a relay-controlled sequence circuit. A Interpret the operation of a relay-controlled sequence circuit 4. Interpret the operation of a relay-controlled sequence circuit diagram. Knowledge Indicator 1. Describe the operation of a seal-in logic circuit.	Standard 205.8 Connect and test electro-pneumatic power circuits	3	Performance Indicator 1. Use the manual override of a solenoid-operated pneumatic DCV to jog a cylinder. 2. Connect and operate a double-acting cylinder using a 5/2 solenoid-operated pneumatic DCV. Knowledge Indicator 1. Describe the function of a power diagram. 2. Describe the function of electro-pneumatic controls and give an application.
2 Describe operation of sequence interlock logic	Standard 205.9 Connect and test electric-relay sequence control circuits	2.75	 Interpret the operation of basic 2-step electric-relay sequence circuit schematic and power diagram. Connect and operate a motor control start/stop circuit. Connect and operate a relay-controlled sequence circuit. Interpret the operation of a relay-controlled sequence circuit diagram. Knowledge Indicator
Standard 205.10 Connect and test relay sequence circuit that uses electronic sensors2.5Performance Indicator 1. Connect and test an electronic sensor in an electrical relay circuit. 2. Interpret the operation a relay-controlled sequence circuit diagram that uses an electronic sensor. 3. Test electronic sensors in-circuit. 4. Test relay control components in-circuit. 5. Troubleshoot relay sequence circuit sensors. 2. Describe control applications of electronic sensors. 3. Describe symptoms and faults of relay control components. 4. Describe methods of troubleshooting relay control sequence circuits.	Standard 205.10 Connect and test relay sequence circuit that uses electronic sensors		 Performance Indicator 1. Connect and test an electronic sensor in an electrical relay circuit. 2. Interpret the operation a relay-controlled sequence circuit diagram that uses an electronic sensor. 3. Test electronic sensors in-circuit. 4. Test relay control components in-circuit. 5. Troubleshoot relay sequence circuits. Knowledge Indicator 1. Describe control applications of electronic sensors. 2. Describe symptoms and faults of relay control components. 4. Describe methods of troubleshooting relay control

Outcomes*

At the successful completion of this course, students will be able to:

Course Outcome	Select the correct sensor needed based on the application for which it will be used.
Course Outcome	Describe how each type of electrical sensor covered works and how it might perform in a given application.
Course Outcome	Demonstrate proper use and connectivity of electrical sensors covered in the class.
Primary Laker Learning	
Competency	Creative Thinking & Problem Solving: Students think creatively to solve problems.
Secondary Laker Learning	
Competency	Communication: Students communicate through the exchange of information.

*Course and program outcomes will be used in the software for outcomes assessment and should include at least 1 primary and 1 secondary Laker Learning Competency. Limit to 3-5.
